

The Learning Lab at SBJA is proud to offer **Fast ForWord**

What is Fast ForWord? Fast ForWord® is an intervention that **dramatically improves language and reading achievement.**

It is different from other interventions because it **strengthens the key pathways in the brain** that help children learn, so they can **pay closer attention to their teachers, absorb information faster, and remember** what they are taught.

The program addresses reading and language skills while concurrently developing foundational cognitive skills like **memory, attention, processing, and sequencing.**

Learning Abilities Improve: Stronger cognitive, language, & reading skills mean students are able to benefit more from their teacher's instruction.

Test Scores Go Up: Studies show that the **Fast ForWord** program can dramatically **boost test scores** in multiple areas, including **reading, language arts, math and social studies.** Classroom participation often improves as well.

Students Get Individualized Instruction: Each student is automatically placed at the **right starting level**, then follows a differentiated learning path that adapts with every click of the mouse.

Fast ForWord Trains:

- Comprehension
- Phonological Skills
- Following Directions
- Memory
- Attention/Focus
- Processing Rate
- Sequencing
- Listening Accuracy
- And More!

Students work on game-like exercises five days a week to build and strengthen key learning skills.
